Every Editor's Dream

Introducing

VideoRaid RTR

Cost Effective Redundant Storage

Never lose sleep again worrying if your content will be there in the morning. Protect your valuable content with one of Medéa's new high-performance and redundant disk arrays.

Our new VideoRaid RTR and VideoRaid FCR disk arrays continue to operate with no loss of data and no degradation in performance in the unlikely event of a drive failure. And we provide this protection at prices less than just-a-bunch-of-disk (JBOD) storage products!

- Ultra160 SCSI or SAN-Ready Fibre Channel Interface
- Over 200 MB/sec Sustained Data Transfer Rates
- Hot Swappable Drive Modules
- Desktop and Rack Mount Configurations

VideoRaid RTR/FCR are compatible with leading content creation hardware and software and offer sustained transfer rates over 200 MB/second – more than enough performance to support the playback of 10-bit, 1080i HD footage. Our patented Multi-Stream Technology (MST) enables the VideoRaid RTR / FCR to playback up to three uncompressed video streams in real-time.

Your work is your life, protect it with VideoRaid and sleep tight.
